## $>$ INTRODUCTION

The product is a cost effective "smart" powered conditioner that accepts all common process pulse signals with a frequency range between ( 0.01 to 65000 ) Hz in standard configuration and (DC to 1000) Hz in counter mode. Typical applications would be to measure flow or batch counting.

The product has a built in capability to operate as a dual input which allows differential flow / count measurement with advanced maths functions. Or, as a single channel input, with an external reset contact.

When operated in signal channel mode, the discrete input can be programmed to reset the total counter, batch counter or latched relay. The input can also be programmed to control the total counter direction with a combination of count up /count down or halt modes available.

A volt free output contact is provided capable of operating as either a relay, latched relay or pulsed relay. High and low level relay functions are also available.

The output stage offers either voltage, bipolar voltage or active / passive current re-transmission signals. The retransmission signal can be ranged to a scale anywhere within the process range.

The product uses a USB port for configuration, together with a simple to use free menu driven software configuration tool, allowing the user to take advantage of the products' comprehensive specification. The device can be configured to operate in three modes:-

- Frequency to process signal mode plus relay
- Advanced frequency mode with K factor, M factor, totalise, rate, maths functions, process signal + relay
- Counter mode with K factor, totalise, maths functions, process signal + relay

PC CONFIGURATION

| EQUIPMENT | Running Windows XP or later with |
| :--- | :--- |
| COMPUTER | USB port |
| USB CABLE | A to mini B |

| METHOD |
| :--- |

| Load PC with USB SPEEDLINK software. |
| :--- |
| Connect SEM1600F USB port to PC USB port using cable. |
| Run software, set configuration required and save to device. |

## SPECIFICATION @ $20^{\circ} \mathrm{C}$

OPERATION MODES

| Dual Channel | Channel A Frequency |
| :--- | :--- |
| Single Channel | Channel B Frequency |
|  | Channel A frequency |
|  | Channel B discrete input |

## INPUT TYPE

Note channel B offers all input sense option when set in discrete mode. In this mode channel B input value is either high or low.

| Frequency Mode |  |
| :--- | :--- |
| Frequency Range | $(0.01$ to 65000$) \mathrm{Hz}$ |
| Min measuring Value | 0.01 Hz |
| Min cut off | 0.01 Hz |
| Min pulse width | 50 uS |
| Sample Time | 0.1 S or 1 S |
| Counter Mode |  |
| Range | (DC to 1000) Hz |
| Min pulse width | 50 uS |
| Tacho (mV) input |  |
| Low trigger | $<100 \mathrm{mV}$ |
| High Trigger | $>200 \mathrm{mV}$ |
| Impedance | $>100 \mathrm{~K} \Omega$ |
| Over voltage | $\pm 50 \mathrm{~V}$ |
| mA Input | $<1.2 \mathrm{~mA}$ |
| Low trigger | $>2.1 \mathrm{~mA}$ |
| High Trigger | $1 \mathrm{~K} \Omega$ |
| Impedance |  |
| PNP, NPN, Contact | $16 \mathrm{~mA} @ 15 \mathrm{~V}$ Excitation |
| Current Max | $9 \mathrm{~mA} @ 8 \mathrm{~V} \mathrm{Excitation}$ |
| Current Max | $<1.2 \mathrm{~mA}$ |
| Low trigger | $>2.1 \mathrm{~mA}$ |
| High Trigger | $1 \mathrm{~K} \Omega$ |
| Impedance |  |
| TTL input | $<1.0 \mathrm{~V}$ |
| Low trigger | $>2.0 \mathrm{~V}$ |
| High Trigger | $100 \mathrm{~K} \Omega$ |
| Impedance |  |
| Sensor supply | $8 \mathrm{~V} \mathrm{dc} \pm 1.0 \mathrm{~V}$ @ 25 mA |
| Namur | $15 \mathrm{~V} \mathrm{dc} \pm 1.0 \mathrm{~V} @ 25 \mathrm{~mA}$ |
| Sensor |  |

| OUTPUT VOLT FREE |  |
| :---: | :---: |
| Max Voltage | 24 V dc |
| Current | 0.5 A dc |
| Relay Actions | High/Low level relay, High/Low latched relay |
| Frequency Mode Signal | Rate A, Total A, Rate B, Total B, Rate Maths Function, Total Maths Function. |
| Counter Mode Signal | Total A, Total B, Total Maths Function. |
| Pulse output | Period (20 to 10000) mS |
| Frequency Mode Signal | Total A, Total B, Total Maths Function. |
| Counter Mode Signal | Total A, Total B, Total Maths Function. |

## APPROVALS

EMC - BS EN 61326
Electrical equipment for measurement control and laboratory use.

Note - Signal input wires to be less than 30 metres to comply. NPN inputs require external $2 \mathrm{~K} \Omega$ pull up resistor.
